

## HOW TO CLEAN YOUR TAP

- » Clean regularly with hot soapy water and a soft cloth or a microfibre cloths (eg. E-cloth).
- » Use a 50/50 mix of water and white vinegar to remove limescale deposits, ensure you rinse thoroughly after use. Do not leave the vinegar in contact with the surface. Use vinegar solution with cotton wool, a nylon scratch pad or toothbrush for stubborn areas. Dry your tap after every use to delay future build up
- » Always rinse your tap with water after cleaning.
- » Always clean your tap 'along the grain' of the scratch pattern (brushed finishes only).
- » Unscrew the removable spout diffuser and clean periodically in warm water and vinegar to maintain flow rates.

## TRY YOUR BEST TO AVOID ITEMS IN THE LIST TO INCREASE THE LIFESPAN OF YOUR TAP.

- » Spray cleaners (irrespective if the label claims otherwise). Be aware of accidentally spraying the tap when cleaning near it.
